

24 – 30 March 2013

Weekly summary

On 28 March the Brisbane price reached \$11.98/GJ, contributing to a high daily average price for the week of \$9.48/GJ. This is the highest ex ante price since 31 January 2013. Also on 28 March, there was a significant accumulation of decrease MOS in Sydney due to demand forecast errors by a number of participants. A total of 24.5 TJ of decrease MOS was allocated on this day.

Long term statistics and explanatory material

The AER has published an [explanatory note](#) to assist with interpreting the data presented in its weekly gas market reports. The AER also publish a range of [longer term statistics](#) on the performance of the gas sector including gas prices, production, pipeline flows and consumer demand.

Market overview

Figure 1 sets out the average daily prices (\$/GJ) in the Victorian Declared Wholesale Market (**VGM or Victorian gas market**) and for the Sydney (**SYD**), Adelaide (**ADL**) and Brisbane (**BRI**) Short Term Trading Market hubs (**STTM**) for the current week compared to historical averages.

Figure 1: Average daily prices – all markets (\$/GJ)¹

	Victoria	Sydney	Adelaide	Brisbane
24 Mar - 30 Mar 2013	4.17	4.78	4.75	9.48
% change from previous week	-4	-2	0	30
12-13 financial YTD	4.48	5.19	5.10	5.84
% change from previous financial YTD	49	69	40	86

Figure 2 compares average weekly gas prices, ancillary market payments and scheduled injections against historical averages for the Vic gas market.

Figure 2: Victorian gas market

	Price (\$/GJ)	Ancillary payments (\$000)*	BOD forecast demand quantity (TJ)
24 Mar - 30 Mar 2013	4.17	-	351
% change from previous week	-4	-	-3
12-13 financial YTD	4.48	-	533
% change from previous financial YTD	49	-	0

* Note: only positive ancillary payments, reflecting system constraints will be shown here

More detailed analysis on the Victorian declared wholesale market is provided in Section 1.

¹ The weighted average daily imbalance price applies for Victoria.

Figures 3 to 5 show average ex ante and ex post gas prices, MOS balancing gas service payments together with the related daily demand quantities against historical averages for the Sydney, Adelaide and Brisbane wholesale gas markets, respectively.

Figure 3: Sydney STTM

	Ex ante price (\$/GJ)	Ex post price (\$/GJ)	MOS payments (\$000)	Ex ante quantity (TJ)	Ex post quantity (TJ)
24 Mar - 30 Mar 2013	4.78	4.97	6.43	211	210
% change from previous week	-2	0	-57	12	12

	Ex ante price (\$/GJ)	Ex post price (\$/GJ)	MOS payments (\$000)	Ex ante quantity (TJ)	Ex post quantity (TJ)
24 Mar - 30 Mar 2013	9.48	8.98	3.53	140	150
% change from previous week	30	9	73	-4	3
12-13 financial YTD	5.84	5.77	2.52	146	145

More detailed analysis of the STTM hubs is found in sections 2 to 4.

Section 5 provides analysis on production and pipeline flows on the National Gas Bulletin Board, as well as gas-powered generation volumes in each state.

Significant Market Events or Issues this week

On 28 March, there was a significant quantity of decrease MOS in the Sydney hub of around 24.5 TJ. This was largely due to overestimates of demand of between 10 and 40 per cent by AGL, Australian Power and Gas, Energy Australia and One Steel.

On 28 March, there was also a 16 TJ reduction in offers priced at less than \$10/GJ for the Brisbane hub compared to days earlier in the week. Demand was 14 TJ lower compared to days earlier in the week, which may have been related to the approaching Easter long weekend. As a result of the reduction in low priced gas, 1 TJ of gas was cleared at prices above \$10/GJ, with the ex ante price being set by an \$11.98/GJ offer. The next cheapest offer was \$9.99/GJ.

On 24 and 30 March, there was significant counteracting MOS in the Adelaide hub. On 24 March, around 7.7 TJ of MOS was allocated to MAP and -5.33 TJ to SEAGAS, with 5.539 TJ to MAP and -5.899 to SEAGAS on 30 March. As discussed in the [3 – 9 February 2013 AER Gas weekly](#), analysis indicates that on days of low gas flows (less than 10 TJ) across the MAP pipeline, MOS volumes typically accrue across both the SEAGas and MAP pipelines. Specifically, there tends to be decrease MOS on the SEAGas pipeline and increase MOS on MAP. On 24 March, volumes of gas allocated on MAP were only 1.86 TJ, and on 30 March only 1.74 TJ.

Detailed Market Analysis

17 – 23 March 2013

1 Victorian Declared Wholesale Market

In the Victorian Gas Market gas is priced five times daily at 6 am, 10 am, 2 pm, 6 pm and 10 pm. However, the volume weighted gas price on a gas day tends towards the 6 am price which is the schedule at which most gas is traded.

The main drivers of price are demand forecasts together with bids to inject or withdraw gas from the market. For each of the five gas day pricing schedules, figures 1.1 to 1.4 below show the daily prices, demand forecasts², and injection/withdrawal bids³. Figure 1.5 provides information on which system injection points were used to deliver gas, in turn indicating the location and relative quantity of gas bids cleared through the market. Gas is priced five times daily (at 6 am, 10 am, 2 pm, 6 pm and 10 pm) when the first schedule and four reschedules apply, while the last 8-hour schedule has been separated into two 4-hour blocks for a consistent comparison with other scheduled injection volumes. The main drivers of price are demand forecasts and gas bids.⁴

Figure 1.1: Prices by schedule

Figure 1.2: Demand forecasts

² These are Market Participants' aggregate demand forecasts adjusted for any override as applied by AEMO from time to time. The main driver of the amount of gas scheduled on a gas day are these forecasts which are forecasts that cannot respond to price or in other words is gas delivered regardless of the price.

³ The price might also be affected by transmission or production (contractual) constraints limiting how much gas can be delivered from a locale or System Injection Point (SIP) from time to time.

⁴ The price might also be affected by transmission or production (contractual) constraints limiting how much gas can be delivered from a locale or SIP from time to time.

Figure 1.3: Injection bids by price bands

Figure 1.4: Withdrawal bids by price bands

Figure 1.5: Metered Injections by System Injection Point

2 Sydney STTM

In each STTM hub, gas is priced once before each gas day (the ex ante price) and once after the gas day (the ex post price). The main drivers of ex ante and ex post prices are demand forecasts, together with participant offers and offers to inject or bids to withdraw gas traded through the hub.⁵ Prices before and after the gas day may also vary depending on how much gas is scheduled before the gas day (setting the ex ante price) and how much gas is consumed in the hub on a gas day (setting the ex post price).

Market Operator Service balancing gas (MOS) payments arise because the amount of gas nominated on pipelines for delivery on a gas day will either exceed or fall short, by some amount, of the amount of gas consumed in the hub. In such circumstances, MOS payments are made to participants for providing a service to park gas on a pipeline or to loan gas from a pipeline to the hub.⁶

Figures 2.1 and 2.2 show daily prices, demand, offers and bids. Figures 2.3 and 2.4 show gas scheduled and allocated on pipelines, indicating the location and relative quantity of gas offers across pipelines and also the amount of MOS allocated for each pipeline.

Figure 2.1: SYD STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	5.25	4.96	4.96	4.96	4.96	3.60	3.59
Ex ante quantity (TJ)	188	219	222	225	219	196	192
Ex post price (\$/GJ)	5.25	4.96	4.96	4.73	4.06	3.59	3.59
Ex Post quantity (TJ)	191	217	218	215	191	184	182

Figure 2.2 (a) Daily hub offers in price bands (\$/GJ)

Figure 2.2(b): Daily hub bids in price bands (\$/GJ)

⁵ The main driver of the amount of gas scheduled on a gas day is the ‘price-taker’ bid, which is forecast hub demand that cannot respond to price and which must be delivered, regardless of the price.

⁶ MOS service payments involve a payment for a MOS increase service when the actual quantity delivered exceeds final gas nominations for delivery to a hub, and a payment for a MOS decrease service when the actual quantity delivered is less than final nominations. As well as a MOS service payment, as shown in figure 2.4, MOS providers are paid for or pay for the quantity of MOS sold into the market or bought from the market.

5 National Gas Bulletin Board

Figure 5.1 shows average daily actual flows for the current week in the aqua boxes⁷ from the Bulletin Board (changes from the previous week's average are shown in brackets). Gas-powered generation (GPG) gas usage is also shown in each region in the aqua boxes. In the orange boxes average daily scheduled volumes and prices for each gas market are provided.

Figure 5.1: Gas market data (\$/GJ, TJ); Production, Consumption and Pipeline flows (TJ)

⁷ Regional Gas Flows: SA = MAP + SEAGAS, VIC = SWP + LMP – negative(NSW-VIC), NSW/ACT = EGP + MSP, TAS = TGP, QLD (Brisbane) = RBP, QLD (Mt Isa) = CGP, QLD (Gladstone) = QGP GPG volumes include gas usage that may not show up on Bulletin Board pipeline flows. Figures for Queensland now incorporate all gas powered generators.
