Dear Kami

RE: CITIPOWER HY 2021 PRICING PROPOSAL

Attached is our pricing proposal for direct control services in HY 2021 in line with the National Electricity Rules and the AER's Final Determination on CitiPower's Distribution Revenue for the six-month period of January – June 2021.

As summarised in this submission, our network tariffs are proposed to recover efficient distribution costs as determined by the AER, as well as transmission and jurisdictional scheme pass-through costs outside our control. Attachment to this letter outlines the list of changes between draft and final pricing submission.

We estimate that based on the most common residential tariff and assuming consumption of 4,000kWh per annum, distribution and metering charges will comprise 23% of a typical CitiPower residential customer's annual electricity bill, or \$324 per annum. This is a decrease of \$39 relative to a total estimated default offer retail bill of \$1,420 per annum (GST exclusive). Whether any decrease in distribution and metering charges is passed onto customers will depend upon the decisions of retailers.

CitiPower has been the lowest cost and most reliable network and one of the most efficient in the National Electricity Market.

We remain focussed on supplying safe, reliable and affordable electricity to our customers.

Yours sincerely

A handwritten signature in black ink, appearing to read "Mark de Villiers".
