

Hi,

Until Snowy 2.0 is finished (massive white elephant) Humelink is a waste of money, especially at this time when renewables are nowhere near the 82% target of 2030.

I'm an electricity consumer. I don't want bills to go up. I want the regulator to protect me from any unnecessary or premature bill increases. Don't approve Humelink.

As an electrical engineer I am also appalled at the amount of wasted money on the entire NEM. Since the RET and LRET were introduced electricity prices have increased dramatically over the CPI.

Stop wasting money on these white elephants and build new HELE coal plants or nuclear. Stop wasting time on renewable energy.

Regards,
Jonathan Andrews
