# 2 Capital base

The capital base roll forward accounts for the value of AGN's distribution network over the access arrangement period. The opening capital base value for a regulatory year within the access arrangement period is rolled forward by indexing it for inflation, adding any conforming capital expenditure (capex), and subtracting depreciation and other possible factors (for example, disposals or capital contributions).<sup>1</sup> Following this process, we arrive at a closing value of the capital base at the end of the relevant year. The opening value of the capital base is used to determine the return of capital (regulatory depreciation) and return on capital building blocks.

This attachment sets out our final decision on the AGN's opening capital base as at 1 July 2023 for the 2023–28 access arrangement period (2023–28 period). It also sets out our final decision on AGN's projected capital base over the 2023–28 period.

## 2.1 Final decision

#### Opening capital base as at 1 July 2023

Our final decision is to accept AGN's revised proposal and approve an opening capital base value of \$1953.1 million (\$ nominal) as at 1 July 2023.<sup>2</sup> This final decision is \$22.4 million (1.1%) lower than our draft decision value for AGN's opening capital base value of \$1975.6 million (\$ nominal).<sup>3</sup>

To determine the opening capital base as at 1 July 2023, we have rolled forward the capital base over the 2018–23 period from 1 January 2018 to 31 December 2022. We then rolled forward the closing capital base value by a further six months to arrive at a closing capital base value at 30 June 2023 (the six-month extension period)<sup>4</sup> in accordance with our roll forward model (RFM). This roll forward process includes an adjustment at the end of the 2018–22 period to account for the difference between actual 2017 capex and the estimate approved in the 2018–22 access arrangement.<sup>5</sup>

In the draft decision, we determined an opening capital base of \$1975.6 million (\$ nominal) as at 1 July 2023 for AGN. Our draft decision made the following changes to AGN's proposed RFM for calculating the opening capital base as at 1 July 2023:<sup>6</sup>

<sup>&</sup>lt;sup>1</sup> The term 'rolled forward' means the process of carrying over the value of the capital base from one regulatory year to the next.

<sup>&</sup>lt;sup>2</sup> AGN, Revised Final Plan 2023-28 - Attachment 1.6B - Roll Forward Model, 24 January 2023.

<sup>&</sup>lt;sup>3</sup> This is driven by updates to the capex estimates for 2022 and the six-month extension period in AGN's revised proposal, which we accept in our final decision.

<sup>&</sup>lt;sup>4</sup> The six-month extension period reflects the decision by the Victorian Government to change the timing of the annual Victorian gas network price changes to a financial year basis from a calendar year basis. This change means the current access arrangement period of 2018–22 is extended by six months and the next access arrangement period will commence on 1 July 2023.

<sup>&</sup>lt;sup>5</sup> The end of period adjustment will be positive (negative) if actual capex is higher (lower) than the estimate approved at the 2018–22 decision; NGR, r. 77(2)(a).

<sup>&</sup>lt;sup>6</sup> AER, Draft decision, Australian Gas Networks (Victoria and Albury) Access Arrangement 2023–28, Attachment 2 – Capital base, December 2022, pp. 13–14.

- Amended the 2017 capex and capital contributions inputs for the 'Meters' and 'Mains and services' asset classes, respectively, to be consistent with the values reported in the RIN for that year.
- Updated the inputs for expected inflation, nominal weighted average cost of capital (WACC) and forecast depreciation for the six-month extension period to be consistent with the final decision PTRM for that period.
- Updated forecast straight-line depreciation for 2023 to be consistent with the approved post-tax revenue model (PTRM) for the six-month extension period.
- For the proposed new 'Accelerated depreciation Future of gas' asset class we updated the final year asset adjustment capital base reallocation amount to \$197.1 million (\$ nominal) as at 1 July 2023 to target our acceptance of AGN's proposed accelerated depreciation amount of \$175 million (\$2022–23).<sup>7</sup> This did not affect the total opening capital base value.

Further, our draft decision noted that the capex for 2022 and the six-month extension period were estimates. We expected AGN to update these inputs in its revised proposal.

In its revised proposal, AGN adopted all of our draft decision amendments. AGN's revised proposed opening capital base is \$1953.1 million.<sup>8</sup> This is \$22.4 million (1.1%) lower than our draft decision. The decrease is due to AGN's revised capex estimates for 2022 and the sixmonth extension period being lower than the total amount approved in our draft decision, reflecting more recent data.

We have assessed AGN's revisions to its capex estimates for 2022 and the six-month extension period. Our final decision is to accept these capex estimates as they are more up to date compared to the estimates adopted in the draft decision.

For the reasons discussed in Attachment 5, we accept AGN's proposed actual capex for 2018–2021 as conforming capex during the 2018–23 period. As the capex for 2022 and the six-month extension period are estimates, we will assess whether actual capex is conforming for these years in the subsequent (2028–33) access arrangement review and adjust for any differences between actual and estimated capex.<sup>9</sup> With the revisions to the 2022 and the six-month extension period capex, we consider that conforming capex has been properly accounted for in the capital base roll forward, consistent with the requirements of the NGR.<sup>10</sup>

Table 2-1 sets out our final decision on the roll forward of AGN's capital base during the 2018–23 period to determine the opening capital base as at 1 July 2023.

<sup>&</sup>lt;sup>7</sup> This is a capital base reallocation and does not affect the total value of the opening capital asset base at 1 July 2023. Note the asset adjustment value of \$197.1 million will not match the target accelerated depreciation amount of \$175 million over the 2023–28 period due to asset adjustment offsets in the RFM deprecation tracking module. We have also amended AGN's proposed remaining asset life for this asset adjustment.

<sup>&</sup>lt;sup>10</sup> NGR, rr. 77(2)(b), 79(1).

Table 2-1	AER's final decision on AGN's capital base for the 2018–23 period (\$
	million, nominal)

	2018	2019	2020	2021	<b>2022</b> ª	2023 <sup>b</sup>
Opening capital base	1572.0	1612.1	1668.2	1729.1	1778.4	1872.9
Net capex <sup>c</sup>	87.7	108.1	129.9	142.2	144.8	71.3
Indexation of capital base	30.4	33.5	26.6	-6.0 <sup>e</sup>	68.4	39.4
Less: straight-line depreciation <sup>d</sup>	77.9	85.4	95.6	86.9	94.3	30.5
Interim closing capital base	1612.1	1668.2	1729.1	1778.4	1897.3	1953.1
Difference between estimated and actual capex in 2017					-19.2	
Return on difference for 2017 capex					-5.3	
Closing capital base as at 30 December 2022					1872.9	
Closing capital base as at 30 June 2023						1953.1

Source: AER analysis.

(a) Based on estimated capex. We expect to true-up the capital base for actual capex at the next review.

(b) The six-month extension period of 1 January to 30 June 2023. Based on estimated capex. We expect to true-up the capital base for actual capex at the next review.

(c) Net of disposals and capital contributions, and adjusted for actual consumer price index (CPI) and halfyear WACC.

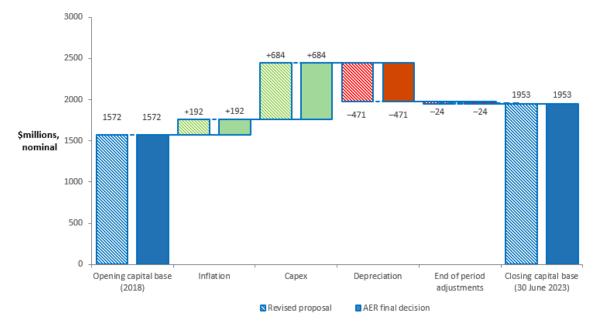

(d) Adjusted for actual CPI. Based on forecast capex.

(e) A negative indexation of the capital base was due to the annual CPI rate of -0.35% (based on June 2020 quarter) published by the Australian Bureau of Statistics.

Figure 2-1 shows the key drivers of the change in the value of AGN's capital base over the 2018–23 period for this final decision. Overall, the closing capital base at the end of the 2018–23 period is 24.2% higher than the opening capital base at the start of that period, in nominal terms. The net capex increases the capital base by 43.5%, while inflation indexation increases it by 12.2%. Depreciation,<sup>11</sup> on the other hand, reduces the capital base by 29.9%.

<sup>&</sup>lt;sup>11</sup> This refers to straight-line depreciation. Regulatory depreciation is straight-line depreciation less the inflation indexation of the capital base.

Source: AER analysis.

Note: Capex is net of disposals and capital contributions. It is inclusive of the half-year WACC to account for the timing assumptions in the RFM.

#### Forecast closing capital base as at 30 June 2028

We approve a forecast closing capital base value of \$2142.3 million (\$nominal) as at 30 June 2028 for AGN.<sup>12</sup> This is \$46.0 million (or 2.1%) lower than the \$2188.3 million (\$nominal) in AGN's revised proposal. This is mainly driven by our final decision on a lower expected inflation (attachment 3). Our final decision on the projected closing capital base reflects our final decisions to the opening capital base as at 1 July 2023,<sup>13</sup> forecast capex (attachment 5)<sup>14</sup>, expected inflation (attachment 3) and forecast depreciation (attachment 4).

Table 2-2 sets out our final decision on the projected roll forward of the capital base for AGN over the 2023–28 period.

<sup>&</sup>lt;sup>12</sup> NGR, r. 78.

<sup>&</sup>lt;sup>13</sup> Our final decision is to accept AGN's revised proposal opening capital base value as at 1 July 2023.

<sup>&</sup>lt;sup>14</sup> Our final decision accepts AGN's revised proposed forecast capex subject to updated WACC and inflation figures.

million, nominal)					
	2023–24	2024–25	2025–26	2026–27	2027–28
Opening capital base	1953.1	2021.7	2074.4	2106.2	2124.1
Net capex <sup>a</sup>	112.7	102.6	88.5	82.2	90.8
Indexation of capital base	57.0	59.0	60.6	61.5	62.0
Less: straight-line depreciation	101.1	108.9	117.2	125.8	134.6
Closing capital base	2021.7	2074.4	2106.3	2124.1	2142.3

#### AER's final decision on AGN's capital base for the 2023–28 period (\$ Table 2-2

Source: AER analysis.

For this final decision, we confirm our draft decision position that the opening capital base as at 1 July 2028 is to be established using the approved depreciation schedules (straight-line) based on forecast capex at the asset class level.<sup>15</sup>

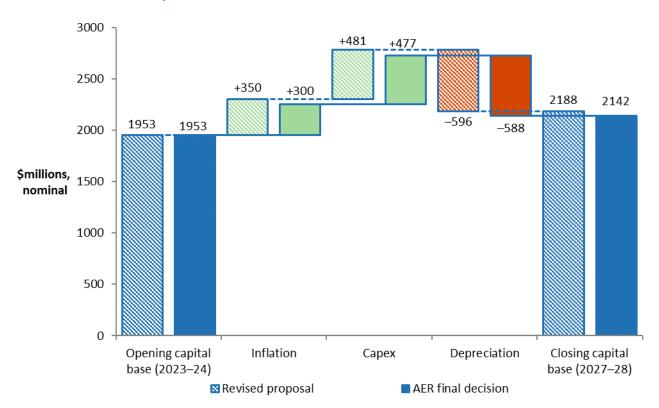

Figure 2-2 shows the key drivers of the change in AGN's projected capital base over the 2023–28 period for this final decision. Overall, the closing capital base at the end of the 2023–28 period is forecast to be 9.7% higher than the opening capital base at the start of that period, in nominal terms. The approved forecast net capex increases the capital base by 24.4%, while expected inflation increases it by 15.4%. Forecast depreciation,<sup>16</sup> on the other hand, reduces the capital base by 30.1%.

<sup>(</sup>a) Net of forecast disposals and capital contributions. In accordance with the timing assumptions of the PTRM, the capex includes a half-year WACC allowance to compensate for a six-month period before capex is added to the capital base for revenue modelling.

<sup>15</sup> NGR, r. 90.

<sup>16</sup> This refers to straight-line depreciation. Regulatory depreciation is straight-line depreciation less the inflation indexation of the capital base.

#### Source: AER analysis.

Note: Capex is net of forecast disposals and capital contributions. It is inclusive of the half-year WACC to account for the timing assumptions in the RFM. Our final decision accepts AGN's revised proposed forecast capex, the difference shown reflects updated WACC and inflation figures.

AGN's revised proposed forecast straight-line depreciation for the 2023–28 period is \$595.8 million (\$nominal). The depreciation amount largely depends on the proposed level of accelerated depreciation and the opening capital base. The opening capital base, in turn, depends on capex in the past. Depreciation associated with forecast capex is a relatively smaller amount. For this final decision, we confirm our acceptance of AGN's proposal for accelerated depreciation, and in turn we have accepted the proposed amount. However, we note concerns about the impact on network tariffs and this is discussed in Attachment 4.

Forecast net capex is a significant driver of the increase in the capital base. In this final decision, we also accept AGN's revised proposed total net capex for the 2023–28 period of \$476.7 million (\$nominal).<sup>17</sup> Our review of AGN's forecast capex is set out in Attachment 5 of this final decision.

<sup>&</sup>lt;sup>17</sup> This amount is net of asset disposals and capital contributions, and inclusive of half-year WACC adjustment. It also reflects our final decision on expected inflation and WACC.

## 2.2 Assessment approach

We have not changed our assessment approach to the capital base from our draft decision. Attachment 2 (section 2.3) of our draft decision details that approach.<sup>18</sup>

<sup>&</sup>lt;sup>18</sup> AER, Draft decision, Australian Gas Networks (Victoria and Albury) Access Arrangement 2023–28, Attachment 2 – Capital base, December 2022, pp. 9–13.
