Note

This attachment forms part of the AER's final decision on the distribution determination that will apply to United Energy for the 2021–26 regulatory control period. It should be read with all other parts of the final decision.

The final decision includes the following attachments:

Overview

Attachment 1 – Annual revenue requirement

Attachment 2 – Regulatory asset base

Attachment 3 – Rate of return

Attachment 4 – Regulatory depreciation

Attachment 5 – Capital expenditure

Attachment 6 – Operating expenditure

Attachment 7 – Corporate income tax

Attachment 8 – Efficiency benefit sharing scheme

Attachment 9 – Capital expenditure sharing scheme

Attachment 10 – Service target performance incentive scheme

Attachment 12 – Customer Service Incentive Scheme

Attachment 13 – Classification of services

Attachment 14 – Control mechanisms

Attachment 15 – Pass through events

Attachment 16 – Alternative control services

Attachment 18 – Connection policy

Attachment 19 – Tariff structure statement

Attachment A – Negotiating framework

4 Regulatory depreciation

Depreciation is the amount provided so capital investors recover their investment over the economic life of the asset (return of capital). In deciding whether to approve the depreciation schedules submitted by United Energy, we make determinations on the indexation of the regulatory asset base (RAB) and depreciation building blocks for United Energy's 2021–26 regulatory control period.¹ The regulatory depreciation amount is the net total of the straight-line depreciation less the indexation of the RAB.

This attachment sets out our final decision on United Energy's regulatory depreciation amount. It also presents our final decision on the proposed depreciation schedules, including an assessment of the proposed standard asset lives used for forecasting depreciation.

4.1 Final decision

Our final decision is to determine a regulatory depreciation amount of \$592.7 million (\$ nominal) for United Energy for the 2021–26 regulatory control period. This amount represents an increase of \$31.7 million (or 5.7 per cent) to the \$561.0 million (\$ nominal) in United Energy's revised proposal.² It is \$64.1 million (or 12.1 per cent) higher than the regulatory depreciation amount determined in the draft decision. The key reason for the increase compared to our draft decision is the lower expected inflation rate that resulted from our inflation review and was implemented in the most recent version of the post-tax revenue model (PTRM).³

The regulatory depreciation amount is the net total of the straight-line depreciation less the inflation indexation of the RAB. The straight-line depreciation is impacted by our decision on United Energy's opening RAB as at 1 July 2021 (Attachment 2), forecast capital expenditure (Attachment 5) and asset lives. Our final decision straight-line depreciation for United Energy is \$22.7 million lower than its revised proposal. This is mainly due to the lower opening RAB and lower forecast capital expenditure (capex) in our final decision.

The indexation on the RAB is impacted by our decision on United Energy's opening RAB (Attachment 2), forecast capex (Attachment 5) and the expected inflation rate (Attachment 3). Our final decision indexation on United Energy's forecast RAB is \$54.4 million lower than its revised proposal. This is largely because we decided on an expected inflation rate of 2 per cent per annum for this final decision compared with the inflation rate of 2.37 per cent per annum that United Energy included in its revised proposal. The lower indexation has more than offset the decrease in straight-line depreciation (since indexation is deducted from the straight-line depreciation), which

² United Energy, *Revised Regulatory Proposal – 2012–26 - MOD 10.02 - PTRM*, updated 24 March 2021.

³ AER, *Electricity distribution PTRM (version 5)*, April 2021.

has resulted in a higher regulatory depreciation amount compared to the revised proposal. In coming to this final decision on United Energy's straight-line depreciation:

- We accept United Energy's revised proposed straight-line method to calculate the regulatory depreciation, which is consistent with our draft decision.
- We accept United Energy's revised proposal to continue with the year-by-year tracking approach to implement straight-line depreciation of existing assets, consistent with our draft decision. However, we have updated the inputs in the depreciation model for 2020 capex, and the forecast equity raising costs and nominal rate of return inputs for the six month period of 1 January to 30 June 2021 (the six month 2021 period), consistent with the roll forward model (RFM).
- We accept United Energy's revised proposed asset classes and standard asset lives, which are consistent with our draft decision. We have updated the equity raising costs standard life using our preferred weighted average approach.
- We accept United Energy's revised proposed reallocation of \$0.2 million of existing assets into its new asset class of 'Accelerated depreciation assets' from the 'Distribution system assets' class. This amount is consistent with the draft decision.⁴

Table 4.1 sets out our final decision on the forecast regulatory depreciation amount for United Energy over the 2021–26 regulatory control period.

Table 4.1 Final decision on United Energy's depreciation amount for the 2021–26 regulatory control period (\$ million, nominal)

	2021–22	2022–23	2023–24	2024–25	2025–26	Total
Straight-line depreciation	140.1	160.3	172.6	183.8	195.0	851.7
Less: inflation indexation on opening RAB	47.8	50.6	52.3	53.5	54.6	258.9
Regulatory depreciation	92.2	109.6	120.3	130.3	140.3	592.7

Year-by-year tracking approach

For this final decision, we accept United Energy's revised proposal to continue using the year-by-year tracking approach to calculate the forecast straight-line depreciation amounts for its asset values as at 1 July 2021. This approach (in addition to grouping assets by type via asset classes) tracks the asset classes on a year-by-year basis to implement straight-line depreciation. This is consistent with our determination for United Energy's previous regulatory control period of 2016–20.

⁴ Subject to an amendment in the depreciation model to reflect the output of the accelerated depreciation model. This amendment does not have a material impact on the depreciation (less than \$0.01 million).

In the draft decision, we required a few minor modelling adjustments to United Energy's year-by-year tracking depreciation model used for implementing straight-line depreciation.⁵ United Energy's revised proposal adopted all our draft decision changes, but it excluded an updated depreciation model. Consistent with our RFM amendments discussed in Attachment 2, we have amended the depreciation model to reflect United Energy's updated capex estimate for 2020 and our amended inputs for the six month 2021 period for the nominal rate of return and forecast equity raising costs. United Energy agreed with these amendments in response to our information request.⁶

Accelerated depreciation

For this final decision, we accept United Energy's revised proposal on accelerated depreciation for its existing assets that will be replaced and become redundant over the 2021–26 regulatory control period. This is consistent with our draft decision.

United Energy's revised proposal adopted our draft decision for the reallocation of \$0.2 million of existing assets for accelerated depreciation.

Energy Consumers Australia (ECA) submitted that there is not currently a consistent and agreed approach for accelerated depreciation and that we need to review our approach in the context of affordability and consistency.⁷ It therefore did not support adopting accelerated depreciation for the revised proposals from the Victorian distributors.

We note ECA's concern, but we have considered this matter in detail in our draft decision. As set out in our draft decision, we reviewed the information before us and decided to reduce the proposed accelerated depreciation amount to \$0.2 million from \$1.9 million.⁸

Standard asset lives

For this final decision, we accept United Energy's revised proposed standard asset lives for its asset classes in respect of the forecast capex to be incurred for the 2021–26 regulatory control period. They are consistent with our draft decision.

The standard asset life for the 'Equity raising costs' asset class needs to be reviewed each regulatory control period. United Energy's revised proposal adopted our draft decision approach to calculating the standard asset life for benchmark equity raising

⁸ AER, *Draft decision: United Energy distribution determination 2021 to 2026, Attachment 4 – Regulatory Depreciation*, September 2020, pp. 12–13.

costs for the 2021–26 regulatory control period. Our draft decision approach was to calculate this life by taking the weighted average of the standard asset lives of total forecast net capex for each asset class over the 2021–26 regulatory control period. For this final decision, we have updated the standard asset life for the ‘Equity raising costs’ asset class to reflect the lives of the mix of assets making up the approved forecast net capex because the equity raising cost benchmark is associated with that forecast. We therefore establish a standard asset life of 27.7 years for amortising the \$0.2 million in equity raising costs.

The Victorian Community Organisations (VCO) submitted that the Victorian distributors apply different depreciation schedules with asset lives that also differ from replacement capital expenditure (repex) assessments.⁹ As we noted in the draft decision, the repex assessments look at assets in more detail at a disaggregated level than the broader depreciation assessment.¹⁰ We also note that in addition to asset lives, repex models also consider performance of the asset as part of assessing when repex should occur. We note the VCO's concerns but consider that the asset lives used in depreciation schedules of the Victorian distributors are appropriate based on the composition of each asset class.

Table 4.2 sets out our final decision on United Energy's standard asset lives for the 2021–26 regulatory control period. We are satisfied the standard asset lives would lead to a depreciation schedule that reflects the nature of the assets over the economic lives of the asset classes. Further, the sum of the real value of the depreciation attributable to the assets is equivalent to the value at which the assets were first included in the RAB for United Energy.¹¹

(a) New asset class created for the PTRM version 4 in order to separate components of IT related assets that must be depreciated using the straight-line method for tax purposes. Refer to attachment 7 (corporate income tax) for more detail.

n/a not applicable. We have not assigned a standard asset life to the 'Land' asset class because the assets allocated to it are non-depreciating.

4.2 Assessment approach

We did not change our assessment approach for regulatory depreciation from our draft decision. Attachment 4 (section 4.3) of our draft decision details that approach.¹²
