

3 – 9 April 2016

Weekly summary

Average prices in Adelaide remained high from the previous week, in line with higher demand. Prices in the other markets increased. Figure 5.1 on page 10 shows increases in gas usage for gas powered generation (GPG) across all markets, which may have contributed to higher prices.

In Victoria, the Iona underground gas storage facility came back online following a maintenance shutdown (from 2–6 April). This resulted in higher demand due to increased withdrawals into the facility. Constrained injections and under forecasting also affected prices on 8 April.

On 4 April, GoEnergy's gas retailer authorisation was revoked by the AER and the participant was suspended from the STTM Sydney and Brisbane hubs by AEMO.¹ An amended notice was published designating default retailers for its customers within New South Wales and Queensland.²

On 4 April in Adelaide, MOS costs were just over \$49 500 for increase requirements on the MAP of 7.8 TJ of gas. This was related to lower quantities of MOS being offered below \$10/GJ in April (6.5 TJ as opposed to 13.5 TJ for the previous month).

Long term statistics and explanatory material

The AER has published an [explanatory note](#) to assist with interpreting the data presented in its weekly gas market reports. The AER also publish a range of [longer term statistics](#) on the performance of the gas sector including gas prices, production, pipeline flows and consumer demand.

Market overview

Figure 1 sets out the average daily prices (\$/GJ) in the Victorian Declared Wholesale Market (**VGM or Victorian gas market**) and for the Sydney (**SYD**), Adelaide (**ADL**) and Brisbane (**BRI**) Short Term Trading Market hubs (**STTM**) for the current week compared to historical averages.

¹ The suspension followed the appointment of an external administrator on 1 April, which triggered a Retailer of Last Resort (RoLR) event under the Retail Law. This resulted in GoEnergy being suspended from the National Electricity Market and the revocation of its electricity retailer authorisation on Saturday 2 April. The [revocation notice](#) for suspension from the STTM was published on the AER website on 4 April.

² AGL was appointed as the default RoLR for Sydney customers on the JGN distribution network and Queensland/NSW customers on the Allgas Energy distribution network, while Origin Energy was appointed for NSW customers on the Central Ranges Pipeline distribution network.

Figure 1: Average daily prices – all markets (\$/GJ)³

Region	Victoria	Sydney	Adelaide	Brisbane
03 Apr - 09 Apr 2016	5.01	4.79	5.73	5.01
% change from previous week	9	11	-1	6
15-16 financial YTD	4.43	4.58	5.17	4.16
% change from previous financial YTD	27	38	42	74

Figure 2 compares average weekly gas prices, ancillary market payments and scheduled injections against historical averages for the Victorian gas market.

Figure 2: Victorian Gas Market

	Price (\$/GJ)	Ancillary payments (\$000)*	BOD forecast demand quantity (TJ)
03 Apr - 09 Apr 2016	5.01	-	418
% change from previous week	9	-	13
15-16 financial YTD	4.43	-	529
% change from previous financial YTD	27	-	4

* Note: only positive ancillary payments, reflecting system constraints will be shown here.

More detailed analysis on the VGM is provided in section 1.

Figures 3 to 5 show average ex ante and ex post gas prices, Market Operator Service (**MOS**) balancing gas service payments together with the related daily demand quantities against historical averages for the Sydney, Adelaide and Brisbane STTM hubs, respectively.

Figure 3: Sydney STTM

	Ex ante price (\$/GJ)	Ex post price (\$/GJ)	MOS payments (\$000)	Ex ante quantity (TJ)	Ex post quantity (TJ)
03 Apr - 09 Apr 2016	4.79	4.45	11.71	230	225
% change from previous week	11	22	-42	6	5
15-16 financial YTD	4.58	4.23	29.46	233	227
% change from previous financial YTD	38	28	120	-2	-5

³ The weighted average daily imbalance price applies for Victoria.

Figure 4: Adelaide STTM

	Ex ante price (\$/GJ)	Ex post price (\$/GJ)	MOS payments (\$000)	Ex ante quantity (TJ)	Ex post quantity (TJ)
03 Apr - 09 Apr 2016	5.73	6.05	13.29	51	56
% change from previous week	-1	6	192	6	13
15-16 financial YTD	5.17	5.27	8.46	59	60
% change from previous financial YTD	42	48	-38	-4	-1

Figure 5: Brisbane STTM

	Ex ante price (\$/GJ)	Ex post price (\$/GJ)	MOS payments (\$000)	Ex ante quantity (TJ)	Ex post quantity (TJ)
03 Apr - 09 Apr 2016	5.01	4.78	1.25	78	78
% change from previous week	6	12	25	19	29
15-16 financial YTD	4.16	4.16	1.55	82	82
% change from previous financial YTD	74	85	-4	-40	-40

More detailed analysis of the STTM hubs is found in sections 2 to 4.

Section 5 provides analysis on production and pipeline flows on the National Gas Bulletin Board (**Bulletin Board**), as well as gas powered generation (**GPG**) volumes in each state, and section 6 provides information on the Gas Supply Hub (**GSH**) at Wallumbilla.

3 – 9 April 2016

1. Victorian Declared Wholesale Market

In the Victorian gas market, gas is priced five times daily at 6 am, 10 am, 2 pm, 6 pm and 10 pm. The imbalance weighted price on a gas day tends towards the 6 am price⁴ which is the schedule at which most gas is traded.

The main drivers⁵ of price are demand forecasts and bids to inject or withdraw gas from the market. Figures 1.1 to 1.4 below show the daily prices, demand forecasts⁶, and injection/withdrawal bids for each of the five pricing schedules. Figure 1.5 provides information on which system injection points were used to deliver gas, in turn indicating the location and relative quantity of gas injection bids cleared through the market.

Figure 1.1: Prices by schedule

Figure 1.2: Demand forecasts

⁴ Prices for subsequent schedules are applied only to the differences in scheduled quantities (imbalances) to calculate the weighted price. The 6 am price applies to the entire scheduled quantity in the initial schedule.

⁵ The price might also be affected by transmission or production (contractual) constraints limiting how much gas can be delivered from a locale or System Injection Point (SIP) from time to time.

⁶ These are Market Participants' aggregate demand forecasts adjusted for any override as applied by AEMO from time to time. These forecasts must be scheduled and cannot respond to price like withdrawal bids.

Figure 1.3: Injection bids by price bands

Figure 1.4: Withdrawal bids by price bands

Figure 1.5: Metered Injections by System Injection Point

Note that in figure 1.5, the last 8-hour schedule from 10 pm has been separated into two 4-hour blocks to provide a consistent comparison with earlier scheduled injection volumes.

2. Sydney STTM

In each STTM hub, a daily gas price is calculated before the gas day (the ex ante price) and after the gas day (the ex post price). The main drivers of these prices are participant demand forecasts, and offers to inject or bids to withdraw gas traded at the hub.⁷ Divergences in ex ante and ex post prices for a gas day may occur due to differences in scheduled (forecast) and allocated (actual) quantities. Pipeline acronyms are defined in the [user guide](#).

Market Operator Service balancing gas (MOS) payments arise because the amount of gas nominated on pipelines for delivery on a gas day will either exceed or fall short, by some amount, of the amount of gas consumed in the hub. In such circumstances, MOS payments are made to participants for providing a service to park gas on a pipeline or to loan gas from a pipeline to the hub.⁸

Figures 2.1 and 2.2 show daily prices, demand, offers and bids. Figures 2.3 and 2.4 show gas scheduled and allocated on pipelines to supply the hub, indicating the location and relative quantity of gas offers across pipelines and also the amount of MOS allocated for each pipeline.

Figure 2.1: SYD STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	4.08	4.85	4.14	5.00	4.85	5.75	4.85
Ex ante quantity (TJ)	195	238	245	246	236	232	216
Ex post price (\$/GJ)	3.90	4.60	4.14	3.00	4.74	6.49	4.30
Ex post quantity (TJ)	189	236	242	232	233	241	200

Figure 2.2: SYD daily hub offers and daily hub bids in price bands (\$/GJ)

⁷ The main driver of the amount of gas scheduled on a gas day is the 'price-taker' bid, which is forecast hub demand that cannot respond to price and which must be delivered, regardless of the price.

⁸ MOS service payments involve a payment for a MOS increase service when the actual quantity delivered exceeds final gas nominations for delivery to a hub, and a payment for a MOS decrease service when the actual quantity delivered is less than final nominations. As well as a MOS 'service' payment, as shown in figure 2.4, MOS providers are paid for or pay for the quantity of MOS sold into the market or bought from the market (MOS 'commodity' payments/charges).

Figure 2.3: SYD net scheduled and allocated gas hub supply (excluding MOS)

Figure 2.4: SYD MOS allocations (TJ), service payments and commodity payments/charges (\$000)

3. Adelaide STTM

The Adelaide STTM hub functions in the same way as the Sydney STTM hub. The same data that was presented for the Sydney hub is presented for the Adelaide hub in the figures below.

Figure 3.1: ADL STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	5.63	5.25	5.05	6.12	5.80	5.90	6.34
Ex ante quantity (TJ)	41	47	52	57	59	57	47
Ex post price (\$/GJ)	5.97	5.80	5.15	6.12	6.36	6.48	6.48
Ex post quantity (TJ)	46	55	54	59	67	65	50

Figure 3.2: ADL daily hub offers and daily hub bids in price bands (\$/GJ)

Figure 3.3: ADL net scheduled and allocated gas hub supply (excluding MOS)

Figure 3.4: ADL MOS allocations (TJ), service payments and commodity payments/charges (\$000)

4. Brisbane STTM

The Brisbane STTM hub functions in the same way as the Sydney STTM hub. The same data that was presented for the Sydney hub is presented for the Brisbane hub in the figures below.

Figure 4.1: BRI STTM daily ex ante and ex post prices and quantities

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Ex ante price (\$/GJ)	4.24	5.70	5.40	5.00	5.00	4.75	4.99
Ex ante quantity (TJ)	51	68	89	87	86	86	80
Ex post price (\$/GJ)	4.00	5.00	4.64	5.00	5.05	4.75	4.99
Ex post quantity (TJ)	51	68	85	90	93	84	78

Figure 4.2: BRI daily hub offers and daily hub bids in price bands (\$/GJ)

Figure 4.3: BRI net scheduled and allocated gas hub supply (excluding MOS)

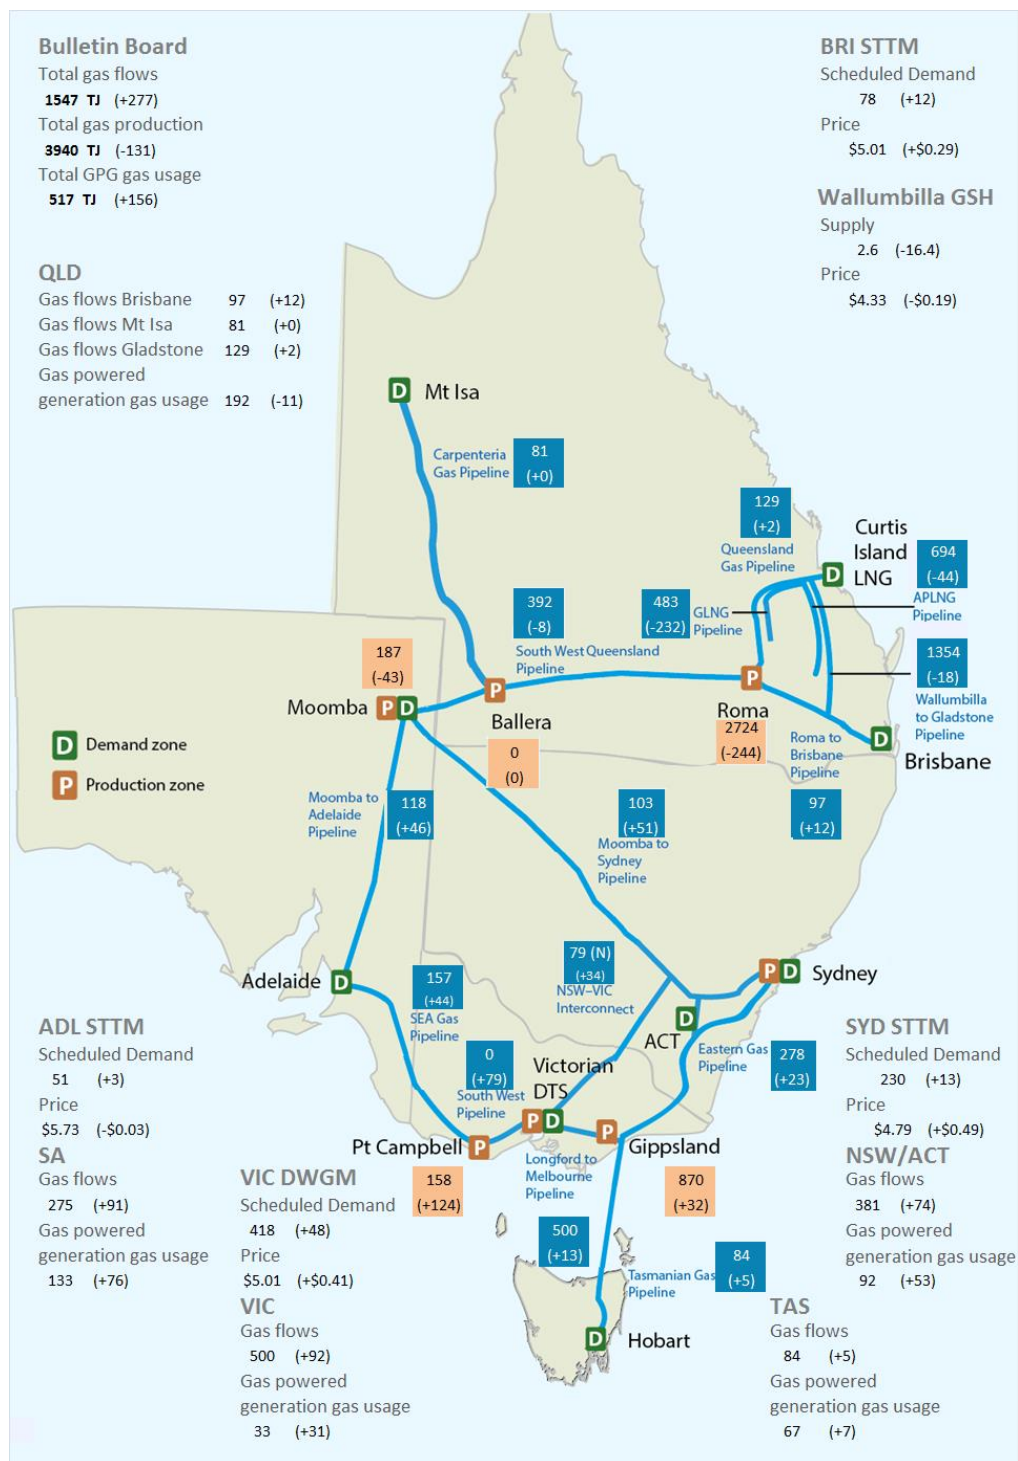

Figure 4.4: BRI MOS allocations (TJ), service payments and commodity payments/charges (\$000)

5. National Gas Bulletin Board

Figure 5.1 shows average daily actual flows for the current week⁹ from the Bulletin Board (changes from the previous week's average are shown in brackets). Average daily scheduled volumes and prices¹⁰ are provided for gas markets and gas powered generation for each region.

Figure 5.1: Gas market data (\$/GJ, TJ/day); Production, Consumption and Pipeline flows (TJ)

⁹ Gas flows shown under regional headings: **SA** = MAP + SEAGAS, **VIC** = SWP + LMP – negative(NSW-VIC), **NSW/ACT** = EGP + MSP, **TAS** = TGP, **QLD (Brisbane)** = RBP, **QLD (Mt Isa)** = CGP, **QLD (Gladstone)** = QGP
 GPG volumes may include gas usage that does not show up on Bulletin Board pipeline flows.

¹⁰ Roma included export LNG production from October 2014 and LNG pipeline flows are shown from October 2015.
 Wallumbilla supply is the average daily volume of gas 'traded', while price is a volume weighted average.

6. Gas Supply Hub

The Gas Supply Hub (**GSH**) was established for the trading of gas at Wallumbilla because it is located in close proximity to significant gas supply sources and demand locations and is a major transit point between Queensland and the gas markets on Australia’s east coast. The GSH is a voluntary market¹¹ for the supply of gas traded between separate participants, with products listed for sale and purchase at delivery points on three major connecting pipelines at Wallumbilla – the Queensland Gas Pipeline (**QGP**), the South West Queensland Pipeline (**SWQP**) and the Roma to Brisbane Pipeline (**RBP**). There are separate products for each pipeline (each pipeline is considered a trading location, and each has a number of delivery points) and delivery period (daily, day-ahead, balance-of-day and weekly).

There were 4 trades on 9 April for 18 TJ of gas at a volume weighted price of \$4.33/GJ. Three of these trades were for daily products on the SWQP (\$4.30/GJ for 15 TJ) and the remaining trade on the RBP was balance-of-day (\$4.50/GJ).

Figure 6.1 shows volumes traded¹² on each gas day and trading day for the current week.

Figure 6.1: Volume Traded (by Gas Day and by Trading Day)

¹¹ Market trade is facilitated through an electronic trading platform, with standardised terms and conditions and a market settlement facility for the short-term trading of physical gas and related products. The market is designed to complement existing bilateral gas supply arrangements and gas transportation agreements, through the placement of anonymous offers (to sell) or bids (to buy) at specified quantity and price increments, which are automatically matched on the exchange to form transactions.

¹² Volumes shown for weekly products include the ‘daily’ volume for each relevant ‘gas day’, and the ‘weekly’ volume for each relevant ‘trading day’.
