

This submission is made in favour of Murraylink Transmission Companies application to the ACCC for conversion to a prescribed service and maximum allowable revenue for 2003-2113. I believe that this should be viewed favourably as this company seems to take into careful consideration the community and enviroment with the installation of underground powerlines as opposed to the above ground lines which are causing much stress. The company with their view for the future is showing their awareness and willingness to address issues that are of major concern to many communities.
